

TPU which is Thermoplastic polyurethane, known as a Supercritical Foaming material for many applications.

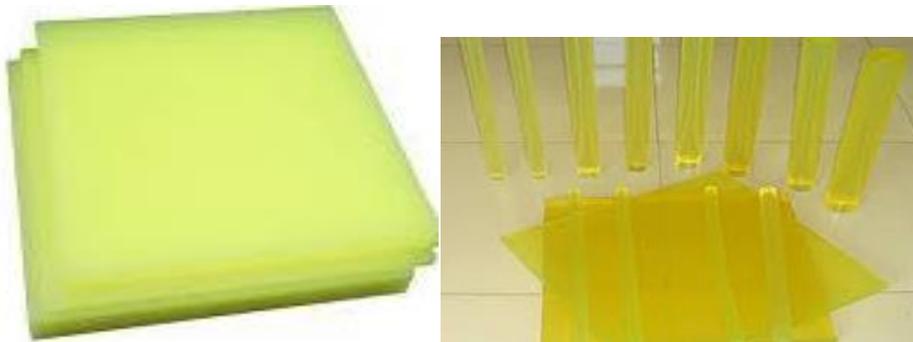

It is

Highly Ductile Bio Compatible Abrasion resistive High shear strength
High elasticity
Transparency Oil and grease resistance

Used for many applications like:

Automotive instrument panels, Caster wheels, Power tools, Sporting goods,
Medical devices, Drive belts,
Footwear, Inflatable rafts, Fire hoses, Variety of Extruded film, sheet and profile uses
Cases of devices like mobile phones and keyboard protectors,
Wire and cable jacketing, Impact modifier of other polymers, 3D printing of flexible and elastic Objects.

With gas Injection and other methods such TPU Sheets with density of 1220 Kg / Meter Cube are then converted in to various Foamed products.

And see the beauty of this Business:

Buy Raw material at Rs. 200 per Kg. and add one conversion cost of about Rs 23 to 25 per kg and sell in the market at Rs. 1000+ per Kg. profit of 400%?

Interested? Meet me.

Kamal Shah,

Consultant based at Amdabad, BHARAT, assisting to set up New and Lucrative projects.
